

# Intensification of oil production by hydraulic fracturing method from terrigenous reservoirs in depleting oil field

Kazan Federal University, 420008, Kremlevskaya 18, Kazan, Russia

---

## Abstract

© 2018 Taylor & Francis Group, LLC. The given article presents the results of industrially applied approaches for intensification of oil production from terrigenous reservoirs at late field development stages. In such condition the oil production is influenced by continuous reserves deterioration. The share of oil resources from low productive reservoirs is increasing. Intensification of oil production with hydraulic fracturing approach is carried in South Romashkinskoe Area of Romashkinskoe Field.
